Actions and activities

	Information search	Comparison	Booking	Travel
Value	Fast access to standardized or pre-designed rubric templates, with easy customization of evaluation criteria and pre-established comments or corrective actions before class	Smooth, real-time grading interface that allows instructors to compare criteria and attach notes without losing focus on the presentation.	Controlled and transparent grade delivery, allowing professors to review and finalize scores before publishing detailed, criterion-level feedback directly to students.	Actionable guidance, clear corrective steps, and tracking tools for students to understand failures and improve in future presentations.
Walls/Barriers	Lack of time to digitize complex rubrics, learning curve or technological friction when configuring criteria, and incompatible legacy format	High-tempo live evaluations causing cognitive overload, risk of connectivity drops, or cluttered interface slowing down note-taking.	Delivery delays, lack of breakdown transparency, or unclear notifications about grading criteria once submitted.	Ambiguous feedback that fails to explain what specific corrective action to take before the next presentation.
Opportunities	One-click rubric import from the university's LMS or base templates, interactive preparation checklist and practical tips for students before the presentation according to the rubric.	Quick-input touch controls, expandable pre-written feedback tags, and audio-to-text quick notes during live scoring.	Automated visual summaries and instant push notifications sent directly to the student portal and mobile app.	Interactive performance comparison charts (e.g., Presentation 1 vs. Presentation 2) and personalized improvement goals.
